HOW TO AVOID 10 COMMON PRODUCTION ERRORS

1 Be sure your JVM heap size is big enough (4 giga MINIMUM!)
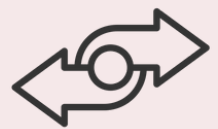

**2** Allot enough disk space (10 giga)

3 DON'T use the development H2 database for production!
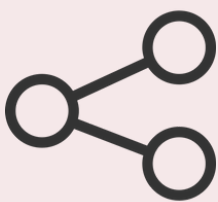

4 Be sure that the minimum database requirements are met

5 Lengthen the XA transaction timeout

6 Pay attention to the number of connectors executed during peak load

7 Pay attention to the number of database connections

8 Increase the limit for open files

9 Make sure your max file upload is big enough

10 Update the *http* session and Bonita Engine timeouts (Tomcat Bundle)
